Outline

- 1 Why is it?
- 2 Packages used
- 3 How to use the *.cls
- 4 Source tex of this presentation
- 5 Source ryslidemess2rain.cls
- 6 L^AT_EX introduction on Wiki

1

Why is it?

- BEAMER is the most popular class
- Among L^AT_EX packages for making presentation
- However, BEAMER is too straight
- Interested by the slide design in ConTeXt
- Let's design some new styles in L^AT_EX

Packages used

geometry set the screen size

fancyhdr set header and footer

titling set title format

tikz design the background

eso-pic display the background

How to use the *.cls

- using `\documentclass{class_name}` to declare the class
- using `\myfrontcover` to show the title page
- using `\tableofcontents` to show the outline
- using `\section` to start a topic
- using `\newpage` to begin a new slide
- using `\mybackcover` to show the end page
- no more difference with L^AT_EX
- no functions like `pause` in BEAMER

50 \newpage\section{\LaTeX{} introduction on Wiki}
51 \LaTeX{} is a document preparation system and document markup language.
52 It is widely used for the communication and publication of scientific documents
53 including mathematics, physics, computer science, statistics, economics, and
54 It also has a prominent role in the preparation and publication of books,
55 and articles that contain complex multilingual materials,
56 such as Sanskrit and Arabic, including critical editions.
57 \LaTeX{} uses the \TeX{} typesetting program for formatting its output,
58 and is itself written in the \TeX{} macro language.
59 \LaTeX{} is not the name of a particular editing program,
60 but refers to the encoding or tagging conventions that are used in \LaTeX+.

L^AT_EX introduction on Wiki

L^AT_EX is a document preparation system and document markup language. It is widely used for the communication and publication of scientific documents in many fields, including mathematics, physics, computer science, statistics, economics, and political science. It also has a prominent role in the preparation and publication of books and articles that contain complex multilingual materials, such as Sanskrit and Arabic, including critical editions. L^AT_EX uses the T_EX typesetting program for formatting its output, and is itself written in the T_EX macro language. L^AT_EX is not the name of a particular editing program, but refers to the encoding or tagging conventions that are used in L^AT_EX documents.
